

Hello,

I am a driven 4th year Master of Computer Science student at Karlstad University. I am currently looking for an innovative company in Östergötland to collaborate with for my Master's Thesis (30 hp), starting in August 2026.

My main areas of interest lie at the intersection of software and hardware. I am deeply passionate about **embedded systems, computer networks, distributed systems, and cybersecurity**.

During my studies, I have built a strong technical foundation, and I am very comfortable working with **C, Python, and C#**. I also have practical experience from various engineering projects involving software architecture, auto scaling, and applied machine learning.

I am a curious problem solver who is eager to apply my theoretical knowledge to real-world technical challenges. I thrive in collaborative environments and am highly adaptable to different project needs.

Whether your team is working on secure embedded solutions, IoT, or robust network architectures, I would love to connect and discuss how I can contribute to your upcoming projects!

Feel free to reach out to me.

Best regards,
